SUMMARY

Software Engineer specializing in backend systems, LLM-powered automation, and developer productivity tooling. Experienced building production-grade APIs, AI orchestration pipelines, and infrastructure at scale.

WORK EXPERIENCE

TinyRocket Labs - Full Stack & AI Engineer

OCT 2025 - Present

- Core engineer for VectorLint, an AI-driven documentation quality platform for Docs-as-Code workflows, contributing across frontend, backend services, and CLI tooling from architecture through production delivery.
- Led implementation of the VectorLint GitHub App, including webhook integrations and CI/CD enforcement checks that gate PRs on documentation quality, cutting manual review cycles and embedding docs standards directly into the development workflow.
- Designed AI workflow automation architecture using n8n and Langflow to orchestrate multi-step LLM pipelines and integrate third-party APIs, replacing manual operational processes across engineering, operations, and internal business workflows.
- Owned deployment pipelines and infrastructure operations for internal automation platforms, including provisioning, monitoring, and incident response to ensure reliability of engineering productivity tooling.

Edubaloo - Backend Developer

MAY 2022 - JUNE 2025

- Architected a real-time WebSocket backend using Node.js, Redis and AWS (EC2 Auto Scaling, Application Load Balancer) capable of handling 20,000+ concurrent connections, with p95 response times under 50ms under load-tested conditions.
- Built an LLM-powered content generation pipeline using LangChain and Python that automated structured content drafting, reducing manual review workload by 60% and cutting average content management time in half.
- Integrated Flutterwave and Paystack payment gateways, resolving recurring failure points in the checkout flow that pushed transaction success rates from 72% to 90% and cut average processing latency by 40%.
- Redesigned MongoDB data access patterns and indexing strategy, improving API performance by 62% (800ms to 300ms).
- Established backend testing standards by introducing automated Jest/Supertest pipelines achieving 95% coverage and reducing regression incidents.

Zercom - Full Stack Developer

AUG 2020 - JAN 2021

- Developed an intranet employee data management software, reducing manual admin tasks by 45% and boosting internal communication efficiency by 30%.
- Revamped 3 WordPress websites by optimizing themes/plugins and implementing lazy loading, decreasing average page load time from 4.2s to 1.8s.

Flux Africa - Full Stack Developer

JUNE 2020 - AUG 2020

- Engineered a custom CRM using vanilla PHP and MySQL to digitize order tracking, integrating Twilio for SMS automation and reducing churn by 20%.
- Developed a custom WordPress theme for a tech podcast, implementing advanced audio player features and optimizing the codebase for a 40% faster load time.

SKILLS

Backend: TypeScript, Node.js, Express, NestJS, Python, GoLang
AI/Automation: LLM systems, LangChain, LangGraph, Langflow, n8n
Cloud & Infrastructure: AWS, Azure, GCP, Docker, CI/CD
Databases: MongoDB, PostgreSQL, MySQL, Redis
Frontend: React, Next.js, Tailwind
Testing: Jest, Supertest

LEADERSHIP EXPERIENCE

- Repotecc

DEC 2019 - Present

 - Built and scaled community operations from 0 to 3,000+ members, designing the organizational structure and leadership pipelines for a team of 32 mentors.
 - Oversaw the concurrent delivery of multiple technical bootcamps, managing curriculum development, instructor coordination, and resource allocation to ensure program success.
 - Developed and implemented internal systems for volunteer tracking and program scheduling, reducing administrative overhead by 60% through workflow automation.
 - Secured and negotiated strategic partnerships with technology companies and educational institutions to expand program reach and operational capacity.
- Google Developer Student Clubs - Chapter Lead
(Oduduwa University)

AUG 2021 - JULY 2022

 - Spearheaded a campus community of 500+ students and managed a core team of 8 officers to foster peer-to-peer learning in Cloud and Web technologies.
 - Organized 30+ hands-on workshops and bootcamps focused on Google Cloud Platform (GCP), TensorFlow, and Web Architecture.
 - Mentored student teams for the Google Solution Challenge, guiding them through the SDLC from ideation to deployment.

AWARDS & CERTIFICATION

Official Letter of Commendation – Google
Kubernetes and Cloud Native Essentials (LFS250) – The Linux Foundation

EDUCATION

B.ENG Computer Engineering – Oduduwa University Ipetumodu
